

DUMISANE MADONDO

APPLICATION DEVELOPMENT STUDENT

OBJECTIVE

Seeking a Work Integrated Learning opportunity to leverage academic knowledge and technical skills in application development. Dedicated to applying creativity, problem-solving, and collaboration within a professional technology environment to deliver value in development projects.

PROJECTS

ENROLMENT SYSTEM APP

Team Leader, Server and Database Developer

Developed an enrolment system entirely in Java, managing server logic and database integration to ensure reliable data handling. Oversaw the team and guided the implementation of client-server communication features, resulting in a stable and efficient application for student registration.

CPUT CLINIC BOOKING SYSTEM

Database Developer, Full Stack Developer

Managed database design and optimization to support appointment scheduling and assisted with backend simulation to validate system workflows. Contributed significantly to frontend integration, enabling a seamless booking interface for patients and improving usability of the clinic's scheduling process.

SAFERIDE

Team Leader, Full Stack Developer

Developed full stack ride-sharing backend with secure authentication and booking features; led team workflow by defining Git branching strategies and managing integrations; conducted thorough code reviews to maintain quality, consistency, and performance.
